

SE Lab-1

Name: Gagan R

SRN: PES1UG24CS665

Problem Statement 56: Peer Skill Exchange & Mentorship Network

Use Case Flow: Schedule Skill Exchange Session

ID	Use Case	Purpose
1.	Manage Skill Profile	Member adds skills they can teach or wants to learn.
2.	Search for Skill Mentor	Learner searches for mentors based on skill.
3.	Schedule Skill Exchange Session	Learner books an available session.
4.	Sync Session with Calendar	Session is exported/synchronized with calendar.
5.	Conduct Teaching Session	Learner and mentor participate in the session.
6.	Verify Session Completion	Both participants confirm completion.
7.	Transfer Time Credits	System transfers time credits after verification.
8.	Provide Session Feedback	Participants rate and review the session.

Actors : Learner Member, Skill Mentor, Calendar Service

Main Success Scenario

1. Learner Member selects **“Find a Skill Mentor”**.
2. The system displays available skills and a search option.
3. Learner Member searches for the required skill.
4. The system displays matching Skill Mentors and their available session slots.
5. Learner Member selects a suitable mentor and available time slot.
6. The system validates that the selected time slot is still available.
7. The system checks whether the learner has sufficient time credits.
8. The system displays the selected mentor, skill, date, time and credit requirement.
9. Learner Member confirms the booking.
10. The system creates the skill-exchange session and reserves the selected time slot.

11. The system synchronizes or exports the session details through the connected calendar service using an iCal feed.
12. The system confirms the booking to the learner and mentor.
13. The use case ends successfully.

Alternate Flow — Time Slot Unavailable

Time Slot Unavailable

- The system detects that the selected time slot is no longer available.
- The system informs the learner that the selected slot has already been booked.
- The system displays other available time slots for the selected mentor.
- Learner Member selects another available time slot.
- The system continues the scheduling process from Step 7.

Alternate Flow — Insufficient Time Credits

Insufficient Time Credits

- The system determines that the learner does not have sufficient time credits.
- The system displays an insufficient-credit message.
- The system informs the learner that additional credits must be earned through teaching sessions.
- The system cancels the scheduling process.
- The use case ends without creating the session.
